Macro Metals (M4M)

A junior Mineral Resources in the making?

- **M4M is both a developer of mining projects and provider of mining services,** capitalising on its dual businesses to kick-start development projects into production by participating in ownership and/or profit share, and securing ongoing mining services revenue over life-of-mine. It is a model not too dissimilar to that which has been successfully employed by Mineral Resources (MIN) over the years.

- **Alliances to help deliver full pit-to-port services.** M4M's mining services subsidiary Macro Mining Services Pty Ltd (MMSV) has key alliances with which it provides the full gamut of pit-to-customer mining services including exploration, mine planning and approvals, site establishment, drill and blast, excavation, load and haul, processing, logistics, stockpiling, port and shipping, sales and marketing, as well as rehabilitation and mine closure.

- **Strategic service partners** include WA Limestone (raw materials for civil construction); RE:Group (road haulage, port, materials handling); Norden (transhipping) and Paramount Earthmoving (modern fleet of heavy machinery and equipment). Through its partnership with WA Limestone, MMSV has its Pippingarra Logistics Hub, 28kms east of Utah Point on the Great Northern Highway, which is approved for crushing and screening, and has existing workshops, wash down and service facilities for heavy mining and road transport fleet, and a 28-room camp with approval for expansion to 100. MMSV is an approved supplier to Rio Tinto (RIO), BHP, Roy Hill, Main Roads Western Australia (WA), and Vault Minerals.
